

SOFRADER

CLOUD SERVICES

CLOUD SERVICES

With the huge growth in cloud computing technologies over the last few years we understand the importance of this option for many of our clients. As a result we have partnered with a dedicated IT firm to supply Cloud servers (on the Microsoft Azure Platform) on which our clients can run Softrader and indeed the rest of the IT requirements.

ACCESSIBILITY

Your server will be accessible from anywhere in the world and using Microsoft Remote Desktop permits access through iPhone/iPad and Android devices.

SECURITY

Your private connection is provided by VPN giving you a very safe and secure way to access data stored on the server. There are inherent advantages to having your data stored offsite (theft of hardware, fire etc) as well as this automated back ups and all other usual security measures can be handled by the IT provider easily and conveniently.

STABILITY

By hosting your server on a worldwide Cloud Computing Platform like Microsoft Azure, you benefit from the stability born from constant large scale hardware investment and upgrades.

CONVENIENCE

Such a system is platform independent so there is no issue for clients who run either Windows or Mac machines or a mixture. It can also be easily integrated with current infrastructure if required. Our partner IT firm have top class support services that are flexible and scalable to your requirements.

ECONOMY

Cloud servers can be a very economical solution when compared to onsite hardware and either an internal IT team or an outsourced firm. There is no need for a local server dedicated to Softrader so this is one possible large saving, added to that they require little maintenance so support is also less costly.

SCALABILITY

Another great advantage is their scalability, its very easy fast and affordable to upgrade its speed and space.
