

SOFTRADER

HANDHELDS

The Softrader Handhelds module is compatible with both Softrader 7 and Cloud. It will give your warehouse staff the ability to perform their major tasks on the move without the need to visit a desktop computer, increasing efficiency and accuracy.

REAL TIME MATERIAL TRACKING

Real time material tracking can save time and hassle by ensuring that it is always easy to locate material in your work processes at any point.

The handhelds module enables a company to give their system feedback at the intermediary moments in the work flow i.e. between a pick list and an advice note being produced. The pick list can be scanned at a warehouse station whether it be for testing or inspection etc, this way users can track the exact whereabouts and status of everything moving through the warehouse.

IMPROVING WAREHOUSE EFFICIENCY WITH MOBILE TECHNOLOGY

By performing tasks on the move on tablet computers companies can save a huge amount of warehouse man hours. Here are some of the features ST7 users can now perform on the move.

Stock takes

Rather than having to fill out stock take sheets that would need to be taken back to the office and entered into the system your staff can simply access the stock take screen on their handheld and enter the quantities directly then and there. The handheld stock take works slightly differently as the location is not locked until it is scanned by the user. Also, if the office have a query about a particular stock code or location they can add it to the handheld stock take quickly and easily.

Location check screen

Users can scan a location and the handheld will tell them what should be there. They can then amend these records if required. You can also view all the other locations for a particular item at the same time.

Unpacking incoming stock

This feature enables users to leave incoming stock unpacked until it is required. The system treats that box as a warehouse location and when it is unpacked the items can be moved to new warehouse locations with this data input on the handheld.

SUPPORT

Softrader Handheld customers benefit from the same online and telephone support services as all our customers, TeamViewer software integrated into our systems also links you to our team at the click of a button.

We offer free no obligation demonstrations of all our products to prospective clients, Contact details below.
